

Submission: Upload your work to GitHub repo till the next practice lesson

Show Your Markup Knowledge

Learning Objectives

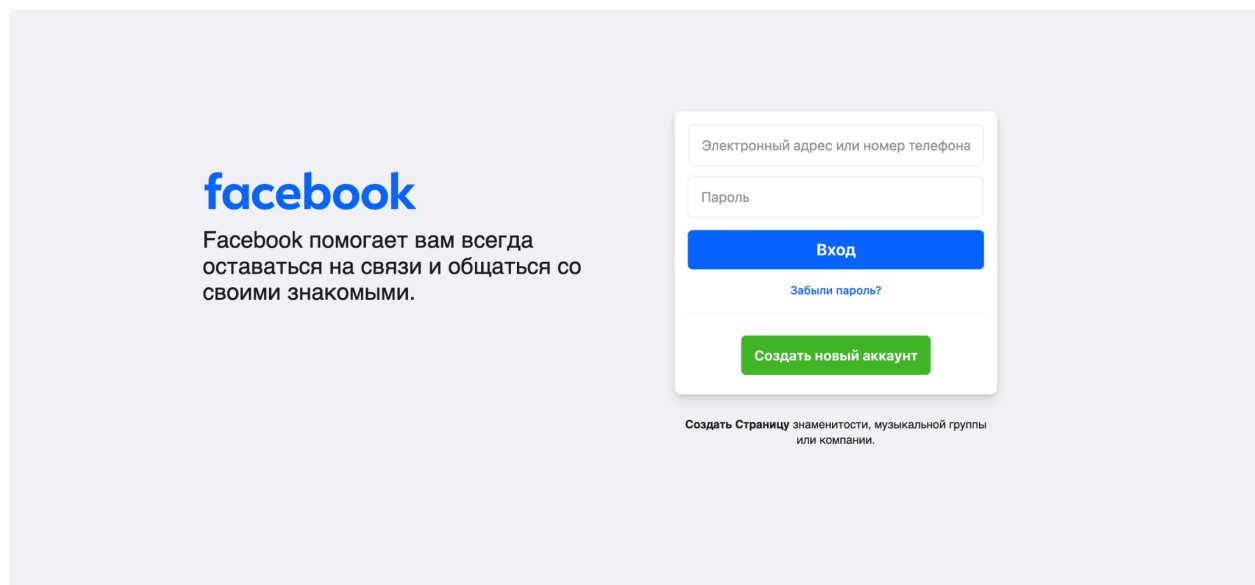

By the end of this lab, you will be able to:

- Create semantic HTML5 page structures using appropriate tags
- Apply CSS3 styling including Flexbox and/or Grid layouts
- Build responsive designs that work across different screen sizes
- Implement accessible form elements with proper labeling
- Replicate existing web designs with attention to detail

Tasks (3)

Task 1. Create a login page for [Facebook](#) using HTML5 and CSS3.

Focus on: Logo, email/phone input, password input, login button, and the "Forgot password?" and "Create new account" links. The page should be centered both horizontally and vertically.

Task 3. Create the [GitHub Pricing page](#) layout up to and including the "Additional add-ons" section using HTML5 and CSS3.

Focus on:

- **Hero section** with headline ("Try the Copilot-powered platform"), description text, and CTA button
- **Three pricing tier cards** (Free, Team, Enterprise) displayed side-by-side
- **Additional add-ons section** with 6 add-on cards in a grid layout

You do not need to replicate: the navigation bar, customer logos carousel, testimonials, feature comparison table, or footer.

Key elements to practice: CSS Grid or Flexbox for card layouts, consistent spacing, button styling, badge/label positioning, and responsive behavior at one breakpoint (e.g., cards stack vertically on mobile).

Requirements

- **Semantic HTML:** Use appropriate tags such as <header>, <nav>, <main>, <form>, <label>, <footer>
- **CSS Layout:** Use Flexbox and/or CSS Grid
- **Accessibility:** All form inputs must have associated <label> elements; images need alt text
- **Code Quality:** Follow HTML and CSS style guides; use meaningful class names

Deliverables

Submit your work folder file containing the following folder structure:

```
lab2/  
  task1/  
    index.html  
    styles.css  
  task2/  
    index.html  
    styles.css  
  task3/  
    index.html  
    styles.css  
    images/ (if needed)
```
